

The Air Inside Your Home

The quality of air you breath inside your home is directly related to the size and number of airborne particles in the air. A wide range of particulate from pollen and pet

dander, to viruses, bacteria and Volatile Organic Compounds (VOCs) are constantly present in the air you breath indoors. Over 98% of these airborne particles are less than

0.1microns in size, that's 10 times smaller than a human hair, and are virtually unaffected by the movement of air. Opening a window, turning on your air conditioning or even a fan, will not budge them from your

living space. Eventually these particles collide with each other and become bigger-this is a natural process called coagulation. Only at this stage will the particulate be large enough to be affected by air flow and be transported back to the filter for removal.

Treating One Room Is Ineffective

Room air purifiers, even ones with HEPA filters, do not treat sub-micron particles. Plus, the encroachment of airborne particles from other living spaces renders these room air cleaners almost completely ineffective. Short of living inside a bubble, only the CirrusAir whole-home air purification solution will ensure the quality of the air throughout your home is protected from viruses, bacteria, and other harmful airborne contaminants and allergy-inducing irritants.

CirrusAir Independently Tested And Proven Efficiency

The combination of high-efficiency filter and unique CosaTron air treatment delivers outstanding results. Independent testing proves how effective the system is in reducing sub-micron airborne particulate while maximizing air velocity (CFM).

"We were blown away by the results we recorded for CirrusAir - it's that good"

Cleanroom Consultants and Certifications

Class 100,000 Clean Room Air Quality - Guaranteed!

The CirrusAir product will purify the air inside your home to Class 100,000 clean room standards-the same air quality levels required by pharmaceutical manufacturing facilities. We are so confident in the performance of our product, we deliver a guarantee and certification upon installation. No other whole-home air purification solution can make this claim. Ask for CirrusAir whole-home air purification to protect your family.

Over 100 years of Air Purification Innovation and Technology

CirrusAir has selected the leading, commercially-available air purification and filter technologies and combined them into a single, affordable and compact residential whole-home solution.

CirrusAir Strata Plus

Advanced CosaTron Air Purification

For the first time in their 50 year history, CosaTron, a leader in commercial air purification, has partnered with CirrusAir to deliver their patented technology to the residential market. The CosaTron system creates a complex electrical charge in the air duct to accelerate the natural coagulation of particulate matter. This increases the size of airborne particles until they are large enough to be affected by airflow and carried back to the filter for removal. No other system is as effective at removing the most harmful particles from your home.

Air Purification for Any Budget

We offer a range of whole-home air purification products to meet any budget.

Feature	CirrusAir	CirrusAir Strata	CirrusAir Strata Plus
Compact 20" X 25" X 11" design	✓	✓	✓
Proprietary 2" pleated filter	✓	✓	✓
Can be upgraded to Strata Plus		✓	Not req'd
Requires 110V 25W Power			✓

5 Star ECI Rating

The proprietary 2" pleated filter inside the CirrusAir family of products is the only residential filter that carries a 5 Star Energy Cost Index (ECI) rating.

CirrusAir Strata

The CirrusAir Filter Difference

Changing your filter is essential to maintain good air quality. Clogged filters are unable to capture more particulate and will cause a static pressure drop in your HVAC system which may lead to expensive repairs. The CirrusAir proprietary 2" pleated filter, designed by one of the world's leading commercial filter manufacturers, has the largest dust-holding capacity of any residential filter on the market. This ensures the filter will maintain a high degree of performance over a longer period of time and reduce the number of times per year you need to replace the filter.

Simple, Affordable Filter Replacement

Most residential filters must be replaced monthly to maintain their efficiency. The CirrusAir proprietary 2" pleated filter inside every CirrusAir product has the best dust-holding capacity of any residential filter and only requires changing twice annually. This significantly reduces the cost and labor of filter replacement compared with competitive products.

Breathe Easier, Insist on the Best

You spend more than half your life inside your home. Breathing clean, fresh, allergen-free air at home will increase your quality of life. Insist on the best, install CirrusAir whole-home air purification in your home today.
